Umandal, Alen Mikel

Mission Statement

Group ALICA exists to replace long queues and manual attendance sheets with fast, accurate, real-time check-ins. We commit to building Checkpoint, a dependable QR-based RSVP and attendance system, through clear role ownership, open communication, and accountability to one another, so that every member grows in both technical skill and teamwork by the end of the project.

Roles

ALICA follows the roles set out in the official project specification. As the specification defines four roles while the team has six members, the roles are loose enough that some members can hold more than one role and some roles can have more than one holder. Every role also includes development work, so each member contributes to the codebase whatever their title.

The roles are defined as follows.

Project manager/developer

The project manager/developer manages the project timeline and checks progress against the initial schedule, reporting it as a percentage of completion along with which features are already implemented and which are still under development. They also delegate tasks to each member, working with the technical lead so the assignments make sense.

Secretary/developer

The secretary/developer keeps the official project records, taking minutes during team and adviser meetings and maintaining a log of decisions and action items. They handle communication with the adviser and other stakeholders, and consolidate the project manager's progress reports into whatever format submissions require.

Technical lead/developer

The technical lead/developer is responsible for the overall system design, including the database design and the application architecture. They work with the project manager to decide which tasks can run in parallel and which must follow a fixed order.

Tester/developer

The tester/developer produces a test matrix covering the project's core features and coordinates testing across the team, since each developer is expected to test their own code before it's merged. They run the final regression pass before release and are responsible for catching issues that individual testing missed.

UI/UX designer/developer

The UI/UX designer/developer develops the mockups and defines the look and feel of the application. They also design the layout of the web components and specify how those components behave.

As the roles have been defined, ALICA has assigned them to its members as follows:

- Layug, Charlz Edison - Technical lead/developer
- Luna, Gracy Mae - Project manager/developer (Group Leader)

- Magno, Bianca Lauryn - Secretary/developer
- Padolina, Ian Charles - UI/UX Developer
- Ramos, Lenard Kristan - Tester Developer
- Umandal, Alen Mikel - Tester Developer

Communication Platform

ALICA reserves the official Viber group for communication between the team and the professor, so that official announcements stay in one place. A separate Messenger group handles day-to-day discussion among members, since members use Messenger more often and this keeps routine messages out of the Viber group. Meetings take place on Microsoft Teams. Technical matters go through GitHub, where members raise problems with the code as issues and pull request comments in the project repository.

Meeting Schedule

ALICA will utilize a flexible meeting schedule instead of fixed weekly slots, but the team must at least hold one meeting per week, either face to face or online, and the team logs minutes for every meeting on the team's Notion page so that a member who misses one can catch up. Face-to-face meetings take place after classes. Online meetings take place on days with online classes or no classes, which currently means Tuesday (online classes) and Friday (no classes).

The project manager gives notice at least one day before each meeting. This gives members time to plan around the date and to say in advance if they cannot attend, giving a prior notice of an absence.

Team Policies

- All members are expected to attend scheduled meetings and actively participate in group discussions and activities.
- Members should communicate respectfully and respond to important group messages within 24 hours.
- Tasks and responsibilities should be clearly assigned, and members are expected to complete their work by the agreed deadline.
- Members who anticipate delays should inform the group as early as possible so adjustments can be made.
- All members should contribute fairly to the project and support one another when necessary.
- Important decisions, assignments, deadlines, and meeting outcomes should be documented for transparency.
- Members are expected to communicate professionally and respectfully, even when disagreements occur.

Consequences for Missed Commitments

- A member who misses a meeting without prior notice will have the absence documented and will be responsible for catching up through the meeting notes.
- If a member fails to respond to important messages within 24 hours, another member may follow up through another communication channel.
- If an assigned task is not completed, the member should notify the group as early as possible. The task may be redistributed or the deadline may be extended once when appropriate.
- After the 24-hour grace period, an unfinished task may be reassigned to another member. The member who missed the commitment will be given an equivalent task in the next sprint.

- Repeated missed commitments or lack of communication will be documented in the group or sprint log and discussed with the member before further action is taken.
- A member may return to good standing by consistently meeting their responsibilities and responding to group communications within 24 hours for one full sprint.

Escalation Scale

Every instance of non-compliance with the standards above shall be logged by the Secretary together with supporting evidence (e.g., chat timestamps, missed-deadline records, meeting attendance logs). Repeated or unresolved violations by the same member follow a fixed, cumulative escalation scale for the duration of the project, distinguishing an initial, subsequent, and final instance:

- **1st Offense** - Warning
- **2nd Offense** - 0.5 Demerit
- **3rd Offense** - 1 Demerit
- **4th Offense** - 2 Demerits
- **5th Offense** - Talk to Professor

A member returns to the first step of the scale (Warning) after a full sprint of good standing, as described above.

Referral to the Professor and Limits on Removal

Upon a fifth offense, the Secretary compiles the logged evidence for all prior offenses by that member, and the Project Manager presents this documentation to the professor for review. Consistent with Article IV of the BIT44 Class Project Team Constitution, ALICA may not remove a member from the team on its own; removal, if warranted, shall be determined solely by the professor upon review of the submitted evidence.

Conflict Resolution

- Members should first address disagreements directly and respectfully with the person involved.
- The members involved should discuss the issue privately and try to reach a mutually acceptable solution.
- If the issue cannot be resolved, the group may hold a short discussion with the affected members and, when necessary, the rest of the team.
- Concerns should be supported by relevant documentation such as meeting notes, chat records, task board history, or commit history.
- The group should focus on resolving the issue rather than assigning blame.
- If a conflict continues to affect the project and cannot be resolved within the group, the matter may be brought to the group leader or project adviser for guidance.
- All members involved should be given an opportunity to explain their side before a decision is made.

Amendment History

9/21/2026 - Drafted Roles, Communication Platforms, and Meeting Schedule

9/21/2026 - Defined new role, Team policies, Consequences for missed commitments, and Conflict resolution

9/24/2026 - Added Mission Statement and assigned Roles to members

By signing this constitution, each member acknowledges that they have participated in creating these policies, understand their responsibilities, and agree to be accountable to the team throughout the project.
